Necando Solutions helps Canadian organizations optimize their most valuable corporate assets – people and data. This leads to accelerated and informed decisions, additional business opportunities uncovered, reduced operating costs and ensured sustainable growth.

Our experienced, mobile and bilingual experts work with you every step of the way. **From strategy to project execution and support**, you can count on our knowledge and integrity to convert your data into concrete results. With Necando Solutions, **power up your organization's efficiency to new heights!**

► CLOUD TRANSFORMATION & MODERNIZATION

For many organizations, leveraging business applications and innovation is a challenge. IT teams must respond to change requests, and also maintain, operate, and improve existing applications.

Moreover, legacy applications typically have large codebase that performs multiple functions. As the applications grow, it becomes difficult to maintain them and to add new innovative features on top of them. Several studies suggest that organizations can save time and money by modernizing conventional applications instead of rewriting existing application code.

Our Cloud Transformation & Modernization expertise helps you simplify your IT infrastructure, reduce your operating costs and take advantage of new technologies. It allows your business to **adapt faster** and more cheaply to **new consumer habits and demands, or to employee new ways of doing**. Your company can thus **improve its processes** by implementing new functionalities in its systems without having to invest massively.

Modern applications can help you deliver better experiences for your customers, which can result in customer retention and satisfaction and therefore increased profitability. The tenets of modern application and platform development highlight the benefits that come with digital transformation. The following sections explain these tenets.

▶ **REDUCE COST AND IMPROVE DEPLOYMENT VELOCITY**

Existing applications continue to drive up budgets. Software development and delivery is fragmented, leading to inefficiencies.

Build, deploy and operate applications built with containers or virtual machines anywhere in a secure, consistent manner. Modernize to reduce dependencies on high-cost proprietary software. Increase software delivery speed and improve service reliability to deliver new experiences for your customers.

▶ **GET STARTED BY MODERNIZING TRADITIONAL APPS**

Incrementally modernize existing applications to avoid vendor lock-in, eliminate licensing costs and reduce operational overhead by containerizing and migrating from proprietary technology stacks to open source frameworks.

▶ **BUILD MODERN CI/CD PRACTICES**

Get innovative software into the hands of your customers faster than ever with automated tools and expert guidance. Build, test and deploy applications that are secure with verified code and consistent security policies.

▶ **APPLICATIONS READY FOR ARTIFICIAL INTELLIGENCE**

Modernization of applications and development using modern cloud-based approaches opens up new opportunities to take advantage of autonomous learning technologies, artificial intelligence and other services that were unavailable before.

▶ **IBM CLOUD PAK FOR DATA**

Whether your priorities are driving cost savings or accelerating innovation to support digital transformation, IBM Cloud Pak for Data helps you deploy services the way you want, on any cloud or on premises. With flexibility at its core, it enables you to modernize at your own pace and speed, and to accelerate your journey to AI with an open extensible data platform that runs on any cloud.
